

Dr. Hagai Yasuor is a Senior Researcher at the Volcani Agriculture Institute. He obtained his Ph.D. from the Faculty of Agriculture of the Hebrew University. His main area of research focuses on crop plants physiology under abiotic stress. He is currently studying the effect of heat stress on vegetable reproductive development, with special attention to the role of plant hormone in flower and fruit development under abiotic stress. His research attempts to improve vegetable fruit set and quality under high temperature stress.
